

Leverage Advanced Site Configuration+ Services to Optimize System Performance

Advanced Site Configuration+ (ASC+) Services from AlsoEnergy leverage our experts to complete modeling and establish critical site-based customizations. We recommend ASC+ for all projects where clients utilize PowerTrack analytics and diagnostics to monitor system health and performance – this enables rapid issue detection and remote troubleshooting, so operators and O&M can make timely, well-informed maintenance decisions. ASC+ builds on our standard ASC offering by providing the same results while reducing the time and effort required from the client. With ASC+, AlsoEnergy’s team will review the as-built drawings rather than the client gathering all data and completing the intake form up-front.

ASC+ Services

- Complete modeling based on the site’s finalized as-built drawings
- Configure system baseline settings
- Input customer-supplied system performance estimates
- Create performance modeling benchmarks for the system
- Run a system capacity test, check phase voltages & current, and check meter & inverter production values
- Configure device-specific alerts
- Validate the site based on data analysis

Benefits of ASC+

- Leverage AlsoEnergy’s team to complete modeling from as-builts
- Thorough validation of monitoring/control systems during commissioning
- Enable the full functionality of the PowerTrack Rule Tool feature
- Improve alert quality and reduce nuisance “noise” alarms
- Get accurate system benchmarks to understand the true performance ratio
- Get alerts for abrupt changes in data and alerts to detect inverter failure by comparing device yields
- Monitor performance of the inverters and DC string/zone hardware

How to Get ASC+ Services

- Approve ASC+ in the project purchase order
- Identify an individual to receive ASC+ communications from AlsoEnergy
- Respond to requests for site survey information
- ASC+ requires proactive client scheduling (generally within two weeks of commissioning)

Advanced Site Configuration+ is a one-time service that AlsoEnergy will execute when all hardware works properly. ASC+ does not include Support or Commissioning services. If ASC+ requires a second completion, you must procure additional services. ASC+ can only be purchased for PowerTrack monitored sites, excluding PV Guard, LocusNOC or Athena monitored systems.
